

Routing Map

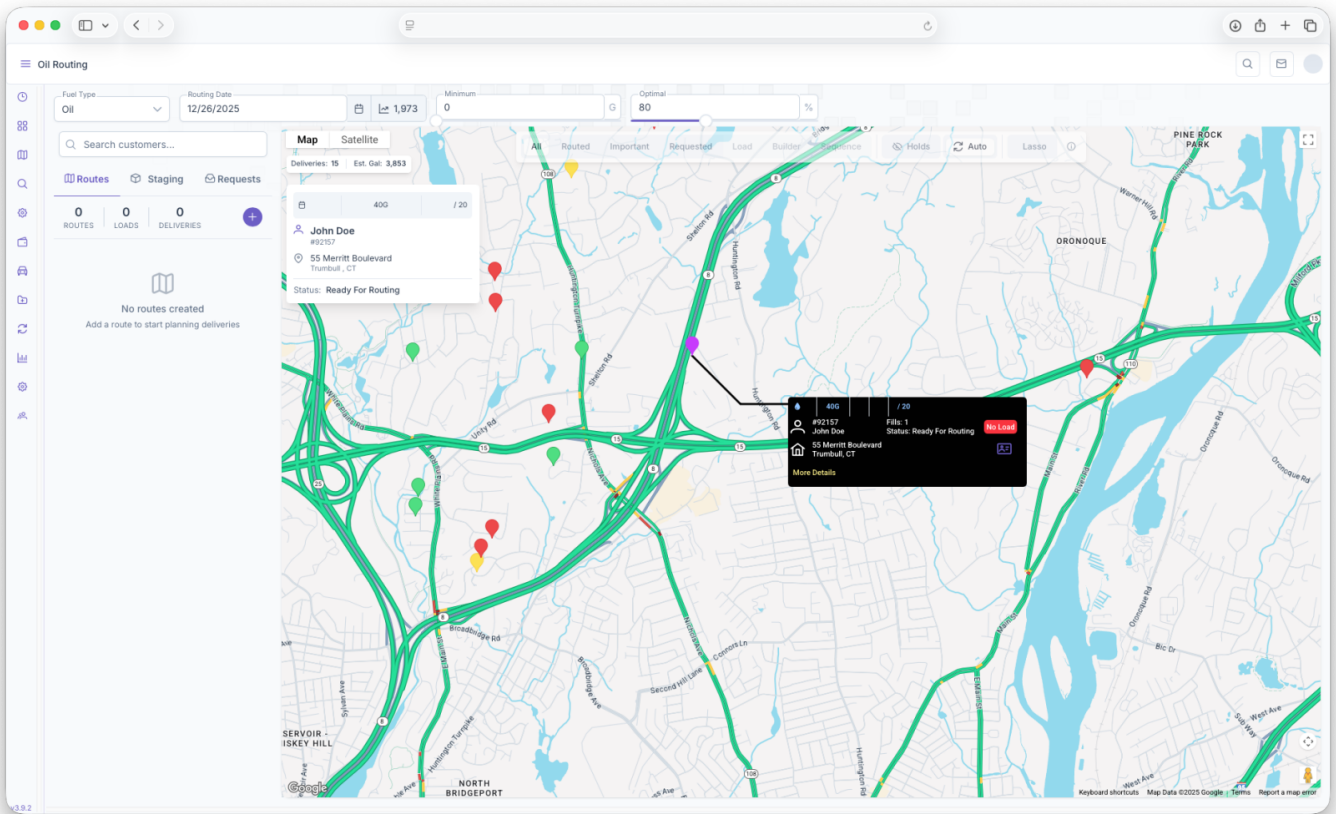

Routing Map

The Routing map is now where all delivery request will show up, including manual and auto deliveries. Before getting started with setting up a route, a few things must be set prior to beginning

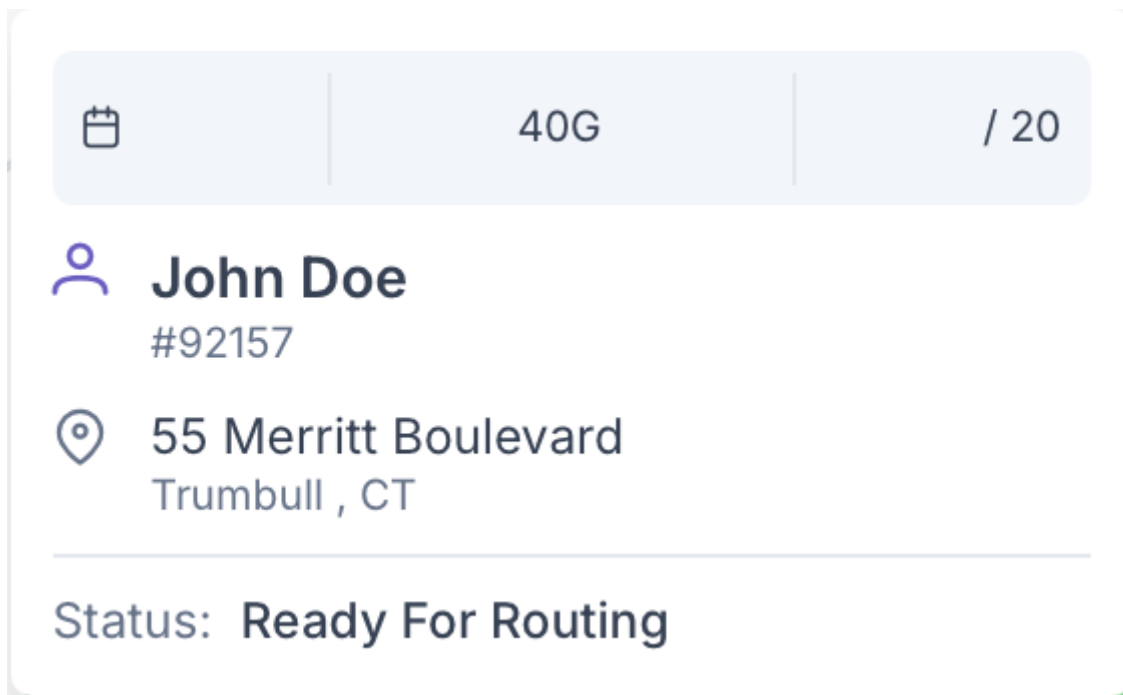

- Fuel Type - Select the fuel that's being routed for delivery
- Routing Date - The date the route is set to be delivered
- Minimum - Can be adjusted to filter out Customers who are below the set minimum gallons on the map
- Optimal - Can be adjusted to filter out Customers who are above the set optimum gallons on the map

These will be the first steps taken in order to start a route. The map will also show the current degree day next to the Routing Date. Once completed, The Routing Map will open up showing all Customers on the map.

Customers on Map

Hovering over a marker will show a brief description of the customer on the map, this includes

- Tank Size
- Expected Deliver/optimum Delivery
- The Customers Name
- Their Account Number

- Address
- Customer Status

Clicking on the marker will bring up a black box with more detail and options to take on the Customer. This box will be used later on for actual routing.

A black popup card with white and yellow text. At the top left is a blue water drop icon. To its right, '40G' is displayed in blue. Further right, separated by a vertical line, is '/ 20' in blue. Below the water drop icon is a white person icon, followed by '#92157' and 'John Doe' in white. To the right of this is 'Fills: 1' and 'Status: Ready For Routing' in white. On the far right is a red button with white text that says 'No Load'. Below the person icon is a white house icon, followed by '55 Merritt Boulevard' and 'Trumbull, CT' in white. To the right of the address is a purple icon of a person with a list. At the bottom left of the card is the text 'More Details' in yellow.

Additional options are that clicking on More Details will bring up a popup showing a more in depth look into the customers information which includes the extra following
